

Frames

Shelterreach have a range of solutions for just about every housing need

Telescop-i-Frame

Telescop-i-Simple

Telescop-i-Compact

Contin-u-Frame

Steel lengths

Continuous steel joints

Connect-a-Bracket

Connectors with logs

Bamboo with metal connectors

Connect-a-Plate

Logs with plates

Timber with scrap metal plates

Extending

Modular construction

Supplying just the connectors and using locally available material reduces the transport volume and cost.

Some systems cost only a few cents per connection to strengthen indigenous houses by up to 30 times the original strength.

Claddings

Tarpaulin

Corrugated Iron

Plywood

Bamboo

Metal

Brick combinations

Stone

A range of frames and cladding systems makes sure there is a solution that utilises the locally available materials.

Alternatively prefabricated systems enable fast compact solutions that can provide a continuum of shelter. Agencies can join the process at any stage knowing it is working towards a long term solution.

Flooring

Options include rammed earth, suspended timber and concrete slab.
